

Gloss Max Ink System

The Gloss Max Ink System was developed for 600 to 800 line aniloxes with doctor blades where screen and solids are on the same plate design. This system will maintain clean, sharp dots while producing strong, bold solids due primarily to ammonia free technology and very high color concentrations.

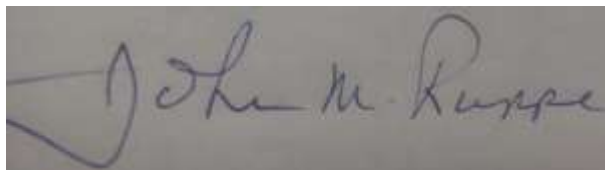

Gloss Max is available in lightfast or non-lightfast formulations, Pantone(R) base colors or premix colors upon request.

Gloss Max Pantone(R) Process Colors require 1000 and up line aniloxes with cell volumes recommended to be 0.8 to 1.5 BCM.

Physical specifications of Gloss Max as follows:

Viscosity	# 3 Zahn	--	18 - 24 seconds
pH		--	8.8 - 9.4
Pigment Concentration %		--	16 - 26

AWG-0232V Gloss Max Reducing Varnish is recommended as the reducer for extended press runs.
